

DGDS Editorial Note:

The present DGDS submission was WITHDRAWN / REMOVED, and the authors were banned from further publishing in all the BSG journals.

The DGDS Editorial Board carefully examined this article, and decided that: *it violates the DGDS copyright agreement, which assumes that the claimed original results should belong to the author(s), and that numerous ad-litteram copied phrases from other sources disqualify a submission.*

The present DGDS submission,

***The geometric and physical interpretation of fractional order derivatives of polynomial functions* authored by M.H. Tavassoli, A. Tavassoli, M.R. Ostad Rahimi, "DGDS 15 (2013), 93-104"**

has a similar structure and ad-litteram copied text with another much earlier paper,

***A new approach to represent the geometric and physical interpretation of fractional order derivatives of polynomial function and its application in field of science,* authored by Nizami Tajuddin, and published in "Canadian Journal on Computing in Mathematics, Natural Science, Engineering and Medicine, vol. 1 No.1, February 2010".**

It was established that the only essential addition brought by the more recent text to the pre-existent one was a computational Section 6 (1-page relying on illustrative numeric tables) and only several extra bibliographic references, *which do not include the primary resource.*
